

Corporate Governance

Executive Management

ARK BUSINESS SOLUTIONS is solely owned by its Chairperson, Amanda Kubrakovich. Since its inception, ARK Business Solutions has been working towards sustainable community development in various First Nation communities with a clear objective of serving for various forms of community development.

The ARK Business Solutions executive management team has a wealth of experience in services, finance, and technology, driving ARK to be the market leader in Strategic Planning, Project Management and E-governance solutions for enterprises and communities with complex and diverse finance organizations.

The management functions independent of their roles and responsibilities and is accountable to their clients and stakeholders. The management has delegated to the Governance Committee of the Chairperson and Managing Director with the role of overseeing corporate governance. Thus, ARK has demonstrated the vision and a comprehensive approach to governance through the integration of empowerment and accountability involving all employees up to the management and ultimately to its employees and stakeholders.

Powerful ideas driven by ideal planning

Operational Staff

Strategic Planning & Project Management Group

Our Strategic Planning & Project Management Group consists of highly qualified management professionals. Each comes equipped with a solid background of niche market expertise and an impeccable solutions-delivery background.

We understand that implementation of any plan, however well thought out, involves changes, and change does not always come easily. Our Strategic Planning & Project Management Group comprises of such project managers who actively strive to develop clear plans for action and implement ongoing evaluations of successes and failures as part of their work. With increasingly complex urban challenges, our team growingly focusing on a set of skills and talents that includes knowledge of land, air and water resources, employment trends, cultural diversity and associated issues, the use and needs of new technologies, and conflict resolution.

Business Development/Customer Support Group

Our Business Development Group has an unerring finger on the global market pulse. Consisting of hardcore market analysts and customer support associates, this Group has a deep understanding of the international marketplace and continually leverages emerging prospects in onshore business activities and projects. Our team encompasses a Business writer with a Degree in Commerce along with a Professional Graphic Arts and Web Designer.

Key Features:

- 24 x 7 System and Network Support Team dedicated for Process;

Our Approach- What Makes us Different

Imagine having the best minds in the business for your disposal. That's what ARK Business Solutions is known for.

Our professionals bring High-Powered research to execute transformative solutions. They take Project Management as a core competence and provide end-to-end project management solutions to our clients. We assist our clients throughout the entire life cycle – right from requirement gathering to delivering the end product.

Project Management life cycle – The fundamental components

- Analyzing the Scope of the Project
 - Defining the Time Constrains (Dead Line)
 - Defining the Budget and Analyzing Cost Requirement
 - Maintaining the Quality throughout the Project Life Cycle
- ARK Business Solutions ensures that each and every phase of the project is taken care of and makes sure that its clients get an end to end assistance, during the process and after the project as well.

E-Governance Solutions

E-Governance solution of ARK is a system for organizations and communities to include government, nonprofit, and private-sector entities together; with no distinct boundaries. The model for e-governance is a one-stop system, where citizens/members/employees have access to a variety of information and services. An ideal system would be one for employment where members create profiles and is presented with employment opportunities at the federal, state, local, non-profit, and private-sectors; these services can also be offered through websites but more often than not users are required to reenter their information for the specific job. However, not all stakeholders have the same desired end-state which inhibits the possibility of a one-stop system.

E-Governance or Electronic Governance solution in simple terms; refers to governance processes in which Information and Communications Technology (ICT) play an active and significant role.

The role of ICT in Governance Sphere could be four fold:

- Improve quality of Governance/Community products and services being currently provided
- Provide new Governance/Community services and products
- Enhance participation of people in choice & provision of Governance/Community products & services
- Bring new sections of society under the governance sphere (including those who are most likeable to remain excluded - namely the poor, women, indigenous people, the youth and underprivileged sections)

In other words, it is not just the simple digitalization, or automation of governance services. It is much more than that. E-governance has to be seen as a 'tool' for good governance and human development.

UPDATE: KEY LEARNINGS

- E-governance solution has to be viewed as a Community/Organization process dealing with reform of governance towards good governance. And governance reform is a slow process- requiring engaging with institutions & bringing about attitudinal and constitutional changes.
- Where leaders lead the community, electronic governance can significantly catalyze the reform process towards good governance.
- In absence of vision and leadership will, the impact of electronic governance models will be weak and may not lead to qualitative change in governance processes. In such cases, there will be far greater onus on civil society organizations/communities to build strong citizens/membership movement to either create a common will or to bring about a change in leadership vision.

Community Planning Services

We deliver Community planning services as a holistic process in which we undertake the entire broad community participation under a comprehensive or individual area approach:

- This service enables the community to establish a vision for its future and implement projects to achieve this vision
- This Model helps to ensure that community projects and programs are thought through, make sense and are the best use of resources
- Lastly, ARK's CCP life cycle integrates and links all other plans together which community has produced

Community Planning Processes are driven by the community, as the communities are most effective at achieving positive change. That's why the comprehensive community planning process is inclusive and represents the perspectives of all members, whether they reside within or outside the community. All members of the community, including Elders, youth, and family representatives, can offer unique and valuable perspectives on community needs, values and priorities.

This comprehensive community plan addresses key planning areas, all of which are interrelated and interdependent: governance, land and resources, health, infrastructure development, culture, social issues, and the economy. Consideration of all key planning areas through one unified process defines community planning as a holistic and integrated exercise that can lead to sustainable development.

about ARK

Our mission - What makes us Different?

To be an industry leader in our market through delivery of high quality service and solutions sublimated by innovative and creative planning for the success of our clients.

“There is no denying the fact that we must embrace the world of Project Management. The Business community cannot afford to be left behind; it is a reality we live with. **ARK Business Solutions** is more than just a Business... where words transform to actions, with a Passion - to serve only the best.”

Infrastructure Solutions

ARK knows how to get the most from your infrastructure needs, growing housing demands and economic development tools. So our infrastructure planning enables your people to create, find and share information better than ever for a stable and strong infrastructure policy in place. Insight into your processes becomes even more crucial as development activities and financial needs converge. And as our infrastructure solutions reach further into database,

business systems, housing policies we use a 3D Blueprinting approach to gain insight into the community's application processes. This visibility helps you get the most functionality from your existing tools. While providing a clear roadmap to high-value application and infrastructure plan implementations, you are also able to reach the government and your stakeholders for the financial requirements.

Your community/enterprise-wide directories offer many compelling economic reasons to consider migrating your existing database platform to a structured database application. One that could significantly reduce your time and costs to find your infrastructure needs and put in place your data and facts in a structured way.

How do you ensure various infrastructure and housing plans are fully consolidated and integrated? Yes you are right, by starting with our master infrastructure and housing plan.

Infrastructure Solution Service Elements

- Housing Policy: Enhance your real-time communications and applications to allow membership and your housing authority to respond with the needs of community/ enterprise housing needs.
- Housing & Infrastructure Database: Creating a sophisticated and user friendly database solution to give you a clear estimation and view your housing and infrastructure needs. Moreover it also enables existing data and facts to get validated and get stored in a centralized application.
- Community / Enterprise Application Integration Middleware: Facilitates communication and cost-saving bridge to other information sources and processes.

Like every other Community/Organization which aspires to grow, our solution will deliver you four strong strategies which are perhaps the building blocks for this entire Infrastructure & Housing Policy Solution.

1. Proper Land use planning and new home construction solution.
2. Renovation & Maintenance solutions for existing housing scenario.
3. Issues Resolutions for all occupancy and maintenance related problems.
4. Financing and funding solution for the Housing initiatives.
